

NYS Donate Life Registry Third-Party Registration Source Data Integration

API Integration Process Overview for Third-Party Registration Sources

The Registry's technical team will provide your entity with the following information:

1. API credentials
2. Postman collection for validation and testing

Integration Process:

1. Complete intake form.

To begin the integration process, please complete the API intake form at <https://donatelifenys.org/insurance-plan-resources>. This form ensures all necessary technical and administrative details are captured before development begins.

2. Implementation Week

During the scheduled implementation week, the Registry's technical team will contact your organization to provide unique API credentials and a Postman collection for testing. These tools will allow your team to connect with the test environment and validate your system's ability to send and receive data successfully, before coding of your actual implementation begins.

3. Consumer Testing

After receiving credentials and documentation, your team should begin testing the integration within your system. For any technical questions or issues during testing, contact registry_tech_support@dlnys.org. The Registry technical support team will assist in troubleshooting and ensuring a smooth process.

4. Notify Completion

When your integration is complete, please notify the Registry technical team at registry_tech_support@dlnys.org so a review and compliance session can be scheduled.

5. Review and Compliance Session

After notification, a session will be scheduled to review the implemented API within the member portal. This session ensures the integration meets Registry standards before moving to production use.
